

Central Authority Fails IoT Trust

Central authority creates a single control-plane failure for IoT devices and edge computing.

— CAPABILITIES

Edge Fleets Need Local Identity

Technical VCs and senior security architects need identity orchestration for bandwidth-constrained edge fleets.

— TIMELINE

DIDs Move Trust To Devices

Self-healing security layer uses decentralized identifiers (DIDs) and zero-knowledge proofs.

— CAPABILITIES

Sub-Millisecond ZK Auth At Edge

Local proof verification targets sub-millisecond authentication without exposing device secrets.

— COMPARE

No Central Bottleneck Is The Moat

Decentralized identity orchestration outperforms traditional security solutions

Traditional Solutions	RECOMMENDED Autonomous Zero-Trust
------------------------------	---

— TIMELINE

Hardware Roots Anchor Device Trust

Hardware-root-of-trust anchors DID keys before each edge session.

— TIMELINE

Neural-Guardian Coordinates Edge Trust

Neural-Guardian consensus algorithm coordinates local trust state without a central authority.

— CAPABILITIES

ZK Proofs Protect Device Identity

Zero-knowledge proofs minimize exposure while self-healing policies quarantine suspicious devices.

Autonomous threat detection

Zero-Trust Identity management

Secure Edge Computing

Zero-knowledge proof flows reduce exposed identity data.

Self-healing remediation rotates credentials after anomalous behavior.

— TRACTION

Sub-Millisecond Authentication Latency

AVERAGE LATENCY: MS

500

1

99th percentile latency:
ms

— CAPABILITIES

Architects Need Decentralized Control

— COMPARE

No Central Bottleneck Is The Moat

Central authority designs add latency, bandwidth dependence, and concentrated trust risk.

Legacy Providers	RECOMMENDED Our Solution
-------------------------	--

— CAPABILITIES

Security Architects Need Execution Depth

Execution requires cryptography, embedded security, and senior security architect credibility.

— CAPABILITIES

Capital Funds Proof And Deployment

Financial projections should use founder-provided revenue and deployment data before investor use.

— CAPABILITIES

Capital Funds Proof And Deployment

Investor pitch ask funds proof hardening, hardware integrations, and pilot deployments.

— TRACTION

Neural-Guardian Is Ready For Diligence

Diligence focus: $O(1)$ verification, low-bandwidth operation, and Neural-Guardian consensus.

SECURITY BREACHES
